Dedication and Experience. A Commitment to Quality.

At our factory situated in South Belfast, we deliver the total service. Investment in equipment means that all parts of the manufacturing process are completed in-house ensuring that commitments and quality are never compromised.

Our team is experienced and dedicated to getting the job right, first time, every time. With over 70 years of team experience, few jobs are beyond us.

Trolleys:

Steelman Engineering manufacture trolleys that are designed to address your every need. We will look at your company's specific requirements and propose individual designs that work!

Operator Work / Information Stations

Workbenches:

Steelman Engineering manufactures the frame for all benches from SHS steel. Joints are fully welded for strength and durability and drilled feet allow the bench to be secured to the floor.

We assess your work requirements to determine which type of framework and work surface would be best suited to your operation. Examples of work surfaces are steel plate, steel coated plywood or melamine.

Other options include information backboards, storage cabinets, drawers, shelves and lockable swivel castors.

Scrap Bins:

To increase productivity, reduce health and safety risks, while improving the look of your shop floor, we recommend installing scrap bins at each workstation.

Scrap bins can vary from paper waste bins to extra heavy-duty forklift ready bins for foundry use. Bins can be static, mobile with wheels or moved by forklift.

Individual requirements can be assessed and recommendations made as to which bins would be best suited to your operational requirements.

To assist with your ISO 14001 requirements, scrap bins can be colour coded and labelled.

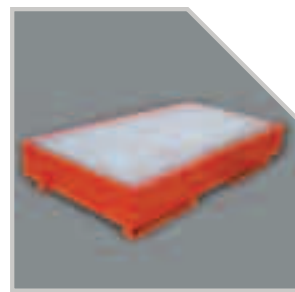

Bund Pallets:

To prevent water course contamination, to meet ISO 14001 and ISO 18001 and ensure good house keeping, bund pallets are available in two standard sizes:

2x45 gallon drum storage

4x45 gallon drum storage

Tote bunds and bespoke bunds can also be built.
